

iamaware™ to View IAM Across Your Enterprise

Powerful solution that monitors IAM productivity, security and health

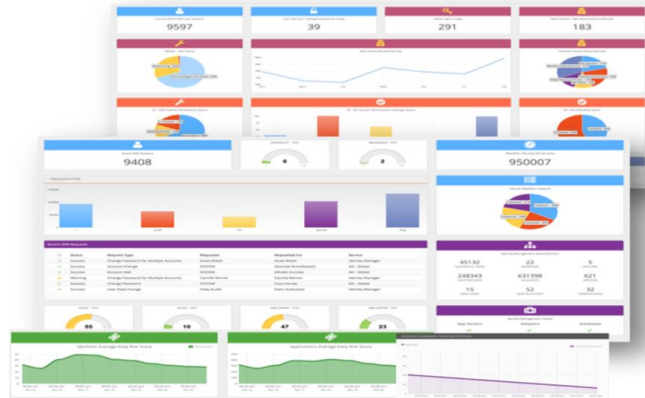

For a fraction of your total spend on IAM, iamaware™ offers:

- Monitoring IAM tools on-premise and in the Cloud
- Continuously tracking the health of IAM across different products and vendors
- Alerting on anomalous behavior, allowing for proactive correction before users are impacted
- Optional reporting of user metrics from HR, ITSM and other data sources

Built upon more than 20 years of industry experience and best-practice

- Lowers IAM operational costs
- Continuously monitors IAM health for proactive maintenance
- Provides service delivery metrics to report on business value
- Displays IAM infrastructure in a single view
- Rapid deployment to quickly provide results

Flexible set of IAM focused dashboards

iamaware™ views of Operations, Security, Administration and Systems with:

- Views of expiring and expired certificates, failed login attempts, privileged account activity and trends, server statistics, productivity measurements, etc.
- Dashboards that can be customized and set up by role or technology
- Single view of all IAM servers, across Production, Test and Development environments.
- Support for disparate products from leading IAM vendors

Schedule a demonstration

We'd be happy to provide a live demonstration of iamaware™ in action, or provide additional information.
