

iamaware™ v2.0 Release Notes

iamaware™ offers a groundbreaking single pane view of your disparate enterprise IAM solutions. You can assess the productivity and value of your IAM investment, monitor operations to identify potential issues before they bring systems down, forecast IAM resource needs based on actual usage and trends resulting in far lower IAM operational costs and improved productivity.

Following are the enhancements and additions included in the iamaware v2.0 release:

- **IAM Reporting**

IAM Reporting is a new add-on feature that provides the ability to run reports on various metrics. Reports can be based on data available within iamaware or via external databases and directories.

Reports can be viewed or downloaded as an Excel or CSV file.

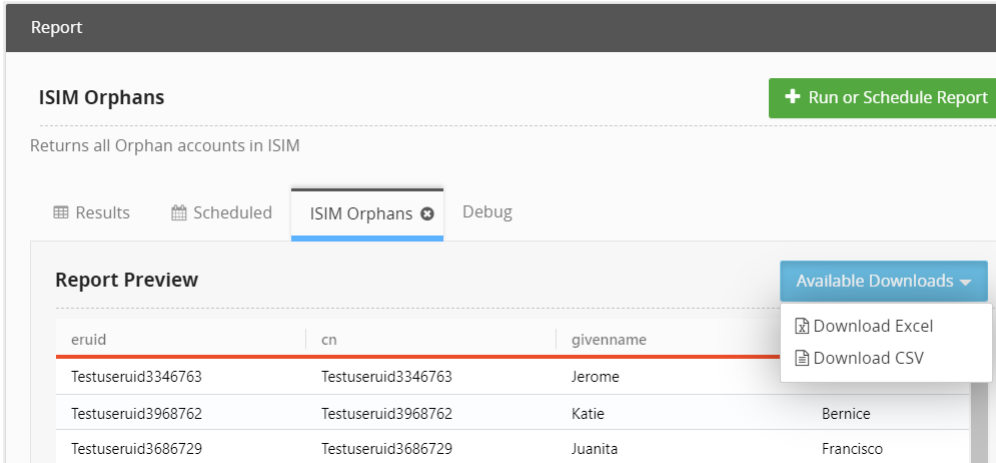

Note: There is an additional license fee associated with the IAM Reporting feature.

The screenshot displays the IAM Reporting interface. The main panel shows a report titled "ISIM Inactive Persons" with a green "+ Run or Schedule Report" button. Below the title are tabs for "Results", "Scheduled", and "Debug". The "Results" tab is active, showing a table with the following data:

Name	Start Time	End Time	Result	Rows	Scheduled by	Delete
ISIM Inactive Persons			Created		Test User	

The right-hand panel, titled "Choose Report", lists various report categories and specific reports:

- Identity Analytics
- KPI Reports
- LDAP Testing
 - All Variables
 - ISIM Active Persons
 - ISIM All Organizational Roles
 - ISIM Inactive Persons**
 - ISIM Orphans
 - LDAP Query with variables
 - LDAP Query with variables - Jasper

ISIM Orphans + Run or Schedule Report

Returns all Orphan accounts in ISIM

Results Scheduled **ISIM Orphans** Debug

Available Downloads

- Download Excel
- Download CSV

○ System Alerts

New System Alerts are now automatically available on the Alerts Dashboard. System Alerts provide notifications based on various checks and logs for the systems monitored by iamaware.

Alerts

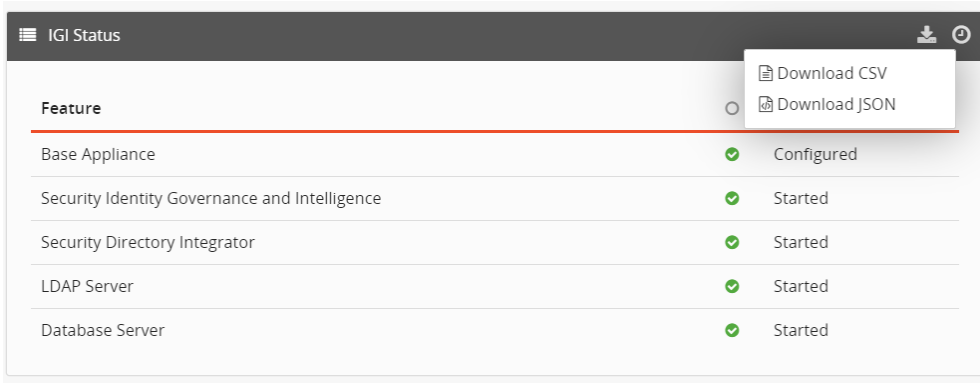

User Alerts **System Alerts**

Search

Name	Object	Email Recipients	Enabled
[System] Alert me before any certificates expire	Certificates	Manage Emails	🟢
[System] Alert me if stat data related to any active alert is stale	Active Alerts	Manage Emails	🟢
[System] Alert when a server is unhealthy	All Servers	Manage Emails	🟢
[System] Alert when a synthetic transaction fails on any server	All Servers	Manage Emails	🟢
[System] Alert when an LDAP replication pending queue is high on any server	All Servers	Manage Emails	🟢
[System] Alert when any file system or drive is filling up	All Servers	Manage Emails	🟢
[System] Alert when any file system or drive is filling up (kilobytes) good one	All Servers	Manage Emails	🟢

○ Widget Downloads

The ability to download data from various widgets is now available. Information from widgets with the  icon in the right-hand corner can be downloaded as a CSV or JSON file.

The screenshot shows a window titled "IGI Status" with a dark header bar containing a menu icon, the title, and download/refresh icons. A dropdown menu is open over the "Feature" header, showing "Download CSV" and "Download JSON" options. The main content is a table with the following data:

Feature	Status
Base Appliance	Configured
Security Identity Governance and Intelligence	Started
Security Directory Integrator	Started
LDAP Server	Started
Database Server	Started
