

## iamaware™ v2.2 Release Notes

iamaware™ offers a groundbreaking single pane view of your disparate enterprise IAM solutions. You can assess the productivity and value of your IAM investment, monitor operations to identify potential issues before they bring systems down, forecast IAM resource needs based on actual usage and trends resulting in far lower IAM operational costs and improved productivity.

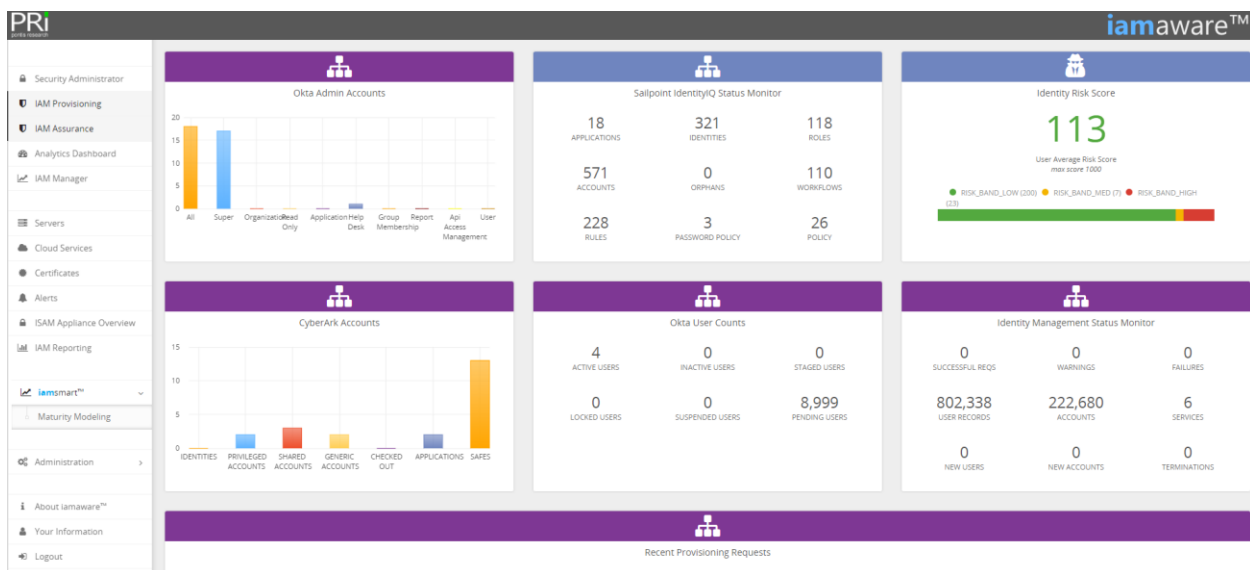

Following are the enhancements and new features included in the iamaware v2.2 release:

### NEW FEATURES:

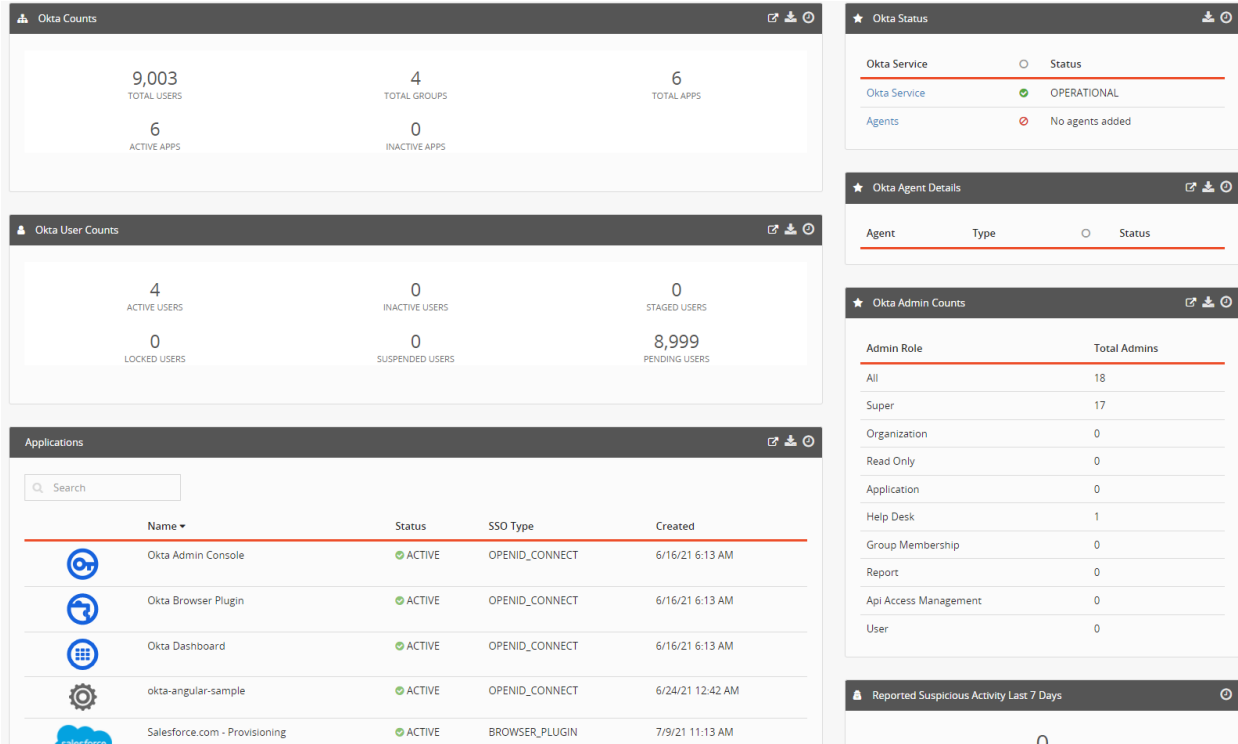

#### OKTA COLLECTOR

You can now view Okta health and analytics on an iamaware dashboard along with your other IAM solutions. In the screenshot below the data from Okta includes the number of Admin Account User Counts. The information displayed on the dashboard can be modified depending on your specific needs. A complete listing of Okta information is available on the Okta server page.

IAM Sample Dashboard with information from Okta, Sailpoint and CyberArk :
