Managing Identity Risk for the Enterprise

Pontis Research Inc. is a minority, woman owned security services company specializing in ***Identity & Access Management***, and ***Identity Governance***. For almost three decades we have helped our clients design, deploy and support traditional IAM environments using a wide range of technology offerings.

With global regulations around securely managing identity data getting a lot more stringent, the need for **securely managing identity data and mitigating the risk of identity data loss** is rapidly moving to the top of mind for most organizations and government agencies.

Leveraging our vast experience in the identity space, we now offer:

- **Identity Risk Maturity Assessment**

    Starting with a tech enabled assessment of where you are in your **identity risk journey**, we translate findings ino **actionable recommendations** and provide a **prioritized roadmap** your organization can implement to align with emerging standards.

- **Third Party Risk Management Program Support**

    With appropriate policies and ongoing monitoring.

- **Privacy Program Enhancements**

    Our clients use our proven capabilities to **implement and deliver** strategic and tactical solutions that help them achieve both long and short term goals and objectives.

privacyaware™

Why use PRI to deliver your IAM and Identity Privacy services?

- We are built upon almost 30 years of proven industry experience across a wide range of industry verticals, including financial, healthcare, higher-ed, government and state agencies etc.

- Our starting assessment is tech enabled and uses industry standards and best practice.

- We offer adaptability and flexibility when working with different client priorities.

- We set realistic and pragmatic expectations.

- We work to stay within timelines and budgets,, with a focus on quality rather than our own profits.

Many clients find ongoing **oversight** or annual **refresh** assessments valuable to ensure they continue to have a modern Privacy Program.

- Assessing organizational compliance with industry and government regulations

- Developing a reference architecture for securely managing internal users and consumers globally

- Securing identities in hybrid environments that include cloud and on premise resources
